

## Solar PV O&M. Use the right tools.

Whether you own a portfolio of solar PV projects or are contracted to deliver O&M services, you need the right tools to ensure maximum uptime. <u>SolarVu Enterprise</u> provides a one screen overview of status and performance for any number of sites. Monitor different vendor equipment with one consistent user interface. Diagnose problems to ensure you have the right equipment before scheduling a truck roll.

When an alarm is received, access any site with 1 click from a single login. Use troubleshooting tools like the <u>30 day log</u> for each inverter and meter. On tough problems the inverter OEM engineer can view detailed <u>inverter status</u> to detect an equipment failure and authorize a warranty return. <u>String monitoring</u> identifies faulty panels by roof location. Keep systems running at full output while minimizing site labour time.
